

Divyesh Parmar

iOS Developer

parmardivyesh2004@gmail.com | 7984598953 | Ahmedabad | [linkedin.com](#) | [Portfolio](#)

PROFILE

iOS Developer with 4+ years of experience developing high-performance iPhone and macOS applications. Proficient in Swift and UIKit, with a proven track record of architecting scalable, user-centered mobile solutions. Expertly integrated RESTful APIs, Firebase, Crashlytics, Google Maps, Razorpay, and Traccar to enhance app functionality. Engineered a custom macOS APNs tool, significantly increasing system reliability and streamlining push notification workflows. Dedicated to optimizing app stability and performance to deliver seamless user experiences.

EXPERIENCE

Trike Mobitech Solutions, iOS Developer

2025 – Present

- Developed the Tribay Customer iOS app using UIKit, Storyboards and Auto Layout, delivering responsive, user-centered interfaces.
- Integrated Google Maps for navigation and Razor-pay for secure in-app payments, and implemented booking/ order flows.
- Built and consumed RESTful APIs for authentication, bookings and order management; implemented robust error handling for network operations.
- Monitored and improved app stability and collaborated with QA to reduce production issues.

Magic Technolabs, iOS Developer

2023 – 2025

- Integrated Traccar GPS with Firebase (Auth, Database, Storage) to enable real-time location tracking and synchronized data across devices.
- Instrumented Crashlytics and resolved critical integration issues to improve app reliability and performance.
- Built a macOS APNs tooling app using SQLite and JWT-based authentication with certificate support to streamline secure push notification delivery.
- Optimized network and background tasks to enhance responsiveness and reduce user-facing errors.

Softs Solution Services, iOS Developer

2022 – 2023

- Architected and delivered high-performance iOS features using Swift, Cocoa Touch, and RESTful APIs, significantly reducing API latency and optimizing data-driven functionality.
- Modernized the UI/UX architecture by integrating advanced animation frameworks and intuitive interaction patterns, driving measurable increases in user session duration and contributing to higher App Store performance ratings.
- Enhanced app quality through QA-driven testing, bug fixes and workflow optimizations, contributing to a promotion to full-time role.

EDUCATION

Diploma Computer, GUJARAT TECHNOLOGICAL UNIVERSITY

- CGPA: 7.46 / 10.0

SKILLS

- | | | | |
|-------------|-----------------------|-----------------------|-------------------------------|
| • Swift5 | • Firebase | • Cocoapod | • Third-party SDK integration |
| • Traccar | • Google Maps API | • FirebaseCrashlytics | • RESTful APIs |
| • SQLite | • GitHub | • SourceTree | • Push Notifications |
| • UI/UX | • Payment integration | • Core Location | |
| • Alamofire | • UIKit | • MultiThreading | |

PROJECTS

Pushmebaby

- Developed a native macOS utility to streamline push notification testing for APNs (Apple Push Notification service) and FCM (Firebase Cloud Messaging).
- Implemented secure authentication protocols supporting JWT (.p8 keys) and Certificates (.p12) for seamless integration with Apple Developer accounts.
- Engineered a template management system allowing developers to save, name, and reuse complex JSON payloads across multiple app environments.
- Integrated real-time validation and error handling to provide instant feedback on notification delivery status and push IDs.
- <https://apps.apple.com/in/app/pushmebaby/%20id6502684602?mt=12>

Video EditorCrop and Mute

- Architected a high-performance video processing engine to merge multiple video streams into a single seamless file using AVFoundation.
- Implemented custom logic for handling diverse video formats, frame rates, and resolutions to ensure consistent output quality across different source files.
- Managed asynchronous exporting sessions using AVAssetExportSession, optimizing for background processing and memory efficiency.
- Developed a dynamic timeline interface that allows users to reorder video segments before final composition.
- <https://apps.apple.com/in/app/video-editor-crop-and-mute/id6447301534>

Amitaly

- Gourmet Italian food app with custom JWT authentication. Supports scheduled pre-ordering, hybrid pickup/ delivery fulfillment, and optimized order history using Core Data and paginated API integration.

RTC Rider

- Developed a high-performance food delivery app featuring real-time order tracking and streamlined logistics. Integrated Google Maps API for rider navigation and RESTful APIs to sync customers and kitchens. Optimized the driver interface to ensure responsive status updates and reliable, timely deliveries.
